

WATER CARE

SILK BALANCE

* It is the recommendation of Hot Water Productions to add chlorine after each use and shock weekly. Silk Balance suggests the opposite – however they do recommend that adding a chlorine shock prior to and following each use is ideal.

START UP:

- Fill your Hot Tub and turn on the power.
- Balance your water starting with Alkalinity, then checking pH and lastly Calcium Hardness.
- Install your Silver Ion Cartridge.
- Add start-up Chlorine to the water 1oz per 200 gallons of water, run jets for 10-15 min.
- Wait 24 hours following start-up.
- Shake the bottle of Silk Balance very well. Pour Silk Balance into the filter area according to the dosage for your spa listed on the cap. **(Do not run the jets after this.)**

AFTER EACH USE:

Add 1tbs. of Chlorine per 200 gallons of water, run clean cycle or jets for 10 minutes

-*Do not add Chlorine the same day you add the Silk Balance.

WEEKLY:

- Test the Alkalinity, then pH and finally Calcium Hardness and adjust as needed.
- Run jets with cover off and add 2oz. of Non Chlorine Shock per 200 gallons of water. Let run for 30 minutes, shut off jets..
- Pour Silk Balance into the filter area according to the dosage for the spa listed on the cap.
DO NOT RUN JETS AFTER SILK BALANCE!
- For the first 3 weeks after a refill, rinse your filters weekly (then switch to a once per month rinse).

MONTHLY:

- Rinse filters and rotate.

EVERY 4 MONTHS:

- Replace your Silver Ion Cartridge.

(SEE REVERSE SIDE OF SHEET)

EVERY 6 MONTHS:

- Drain and Refill your spa.
- Clean your filter(s) with a filter cleaning solution, rinse thoroughly and rotate them.
(We recommend t do this in the Spring & Fall)

OTHER TIPS:

If you have well water, fill with a Clean Screen filter every time. You may also want to use a Vanishing Act calcium remover if Calcium Hardness level exceeds 400 ppm. Change your paper filters every 1-2 years depending on use. Tri-X filters should last up to 3-4 years.
